TUTORIAL-1

Developing a simple web application which enables the students to submit their feedback and view all submitted responses. The application should have the following components:

- FeedbackForm – used to collect feedback from the user
- FeedbackList – used to display the submitted feedback

Design React.js functional components by performing the following:

- Make use of a controlled form in FeedbackForm to capture Student Name, Email ID, Contact No., and Feedback Message
- Utilize state to store the feedback entries.
- Send the submitted feedback from FeedbackForm to the component managing the state
- Pass the stored feedback data to FeedbackList for rendering
- After feedback submission, the form fields should be cleared and the feedback list should be updated dynamically to show the latest entry

Implementation :

Student Feedback Portal

We value your thoughts and suggestions.

Submit Your Feedback

Student Name *

Email ID *

Contact No.

Feedback Message *

Share your thoughts...

Submit Feedback

Recent Feedback

No feedback submitted yet. Be the first to share your thoughts!

Student Feedback Portal

We value your thoughts and suggestions.

Submit Your Feedback

Student Name *

Email ID *

Contact No.

Feedback Message *

Share your thoughts...

Submit Feedback

"It was good"

Code :

FeedbackFomr.jsx

```
import React, { useState } from 'react';

function FeedbackForm({ onSubmit }) {
  const [formData, setFormData] = useState({
    studentName: '',
    email: '',
    contactNo: '',
    message: ''
  });

  // ... (rest of the code) ...
}
```

```

const handleChange = (e) => {
  const { name, value } = e.target;
  setFormData(prev => ({
    ...prev,
    [name]: value
  }));
};

const handleSubmit = (e) => {
  e.preventDefault();
  if (!formData.studentName || !formData.email || !formData.message) {
    alert('Please fill out the required fields.');
```

return;

}

onSubmit(formData);

setFormData({

 studentName: '',

 email: '',

 contactNo: '',

 message: ''

});

};

return (

 <div className="feedback-form-container glass-panel">

 <h2>Submit Your Feedback</h2>

 <form onSubmit={handleSubmit} className="feedback-form">

 <div className="form-group">

 <label htmlFor="studentName">Student Name *</label>

 <input

 type="text"

 id="studentName"

 name="studentName"

 value={formData.studentName}

 onChange={handleChange}
